

Keep Your Shop Data Safe

A short guide for the shop owner — please read and follow.

1. Where your data is stored

All your shop's information (sales, customers, stock, money) is kept in one file on this computer. The file is at:

C:\Users\`(your Windows login name)`\AppData\Roaming\ShopERP\shop.db

Tip: open any folder window, click the address bar at the top, type **%AppData%\ShopERP** and press Enter. You will see the file there, named **shop.db**.

2. How to back up — every Friday

1. Plug in a USB drive (USB stick).
2. Open the folder shown above and find the file named **shop.db**.
3. Copy that file onto the USB drive.
4. Keep the USB drive somewhere safe, away from this computer.

Do this every Friday, without fail.

3. If this computer breaks or is lost

1. Get a new computer.
2. Install the ShopERP app on it.
3. Copy your backup file from the USB drive into the same folder shown above.
4. Open the app. Your shop's data is back.

4. What this app cannot do yet

- It does not save your data on the internet.
- It does not share data with a second computer.
- It does not work on a phone.
- It does not save a copy anywhere by itself.

If this computer is lost or stops working, and you have no USB backup, your shop's data is gone for good.
